Red McClintock
Director, Droneshield

Red is a Business Development Manager with a military technical background. He served twenty-three years as an officer in the Royal Australian Navy including operational deployments to Iraq and Afghanistan and served in seven different classes of warships. During his time with the Navy, Red evaluated, acquired, and operated numerous capabilities including Command and Control, Electronic Warfare and Hard-Kill options. He has a broad military experience spanning operational, technical, acquisition and sustainment roles – from this he recognises that the needs of frontline operators should be fundamental to all systems (although lamentably this is not always the case).

Prior to joining DroneShield, Red worked for five years with BAE Systems as a Business Development and Account Manager. Over this period, he was a key individual in the successful "Hunter Class" future frigate bid ($35b), following this with roles in the Electronic Warfare and Geospatial Intelligence domains. He is a staunch believer in Australian Industry and seeks to grow SMEs wherever he sees a good opportunity
